

## **PERSONAL ASSISTANCE FOR SENIORS WHO ARE SELF-RELIANT**

### **Problem Statement**

Existing system is a manual process so it required lots of man power and paper work. And also its have more possibilities to lost the data. The Proposed system requires less time for completion of any work. This is contrast to the sequential search being done in the existing system have been taken care of in the system.

### **I am (USER)**

Patients have to upload the medicines details to the system to get the voice commands for take medicine with correct time.

### **I am Trying To**

The operations like updating and synchronizing data are also done manually in the existing system that is not automated and again time-consuming process. The proposed system of the medicine reminder system will have one duty and that would be to remind the user that he is due for taking the medicine.

### **But**

The manual system is more error prone.

### **Because**

The possibility exists for the existing systems to hang down due to the manual work involved.

### **Which makes me feel?**

This is contrast to the sequential search being done in the existing system have been taken care of in the system. The proposed system of the medicine reminder system will have one duty and that would be to remind the user that he is due for taking the medicine. We are trying to make sure that the user never forgets to take the medicines.
